

# FACIALLY GENERATED TREATMENT PLANS

Daily chair-side dentistry is solely dependent on the skills of the practitioner to evaluate, diagnose and present dentistry. Unfortunately, most graduates are unskilled to address both occlusion and esthetics and consequently offer fine dentistry but ***incomplete treatment plans***. Subsequently, patients don't receive the benefits of more beautiful smiles and restorative dentistry that

withstands the test of time. The practice suffers from the 'busyness' created by single tooth dentistry instead of relaxing and more profitable full arch care.

Dr. Reid has treated over two thousand destructive occlusions in his general practice. In this course, he presents the knowledge and skills that weren't emphasized in dental school so you will **acquire a fresh and simplified understanding** to develop the confidence to *treatment plan what people really need and want*.

Learn why diagnostic principles around occlusion and esthetics are essential to achieve the step-by-step system of planning required for long term clinical success and patient satisfaction. In addition, the concepts of how to present your findings to the patient are covered in detail.

## PARTICIPANTS WILL LEARN:

- Which photographs are necessary for patient education, comprehensive treatment planning and lab communication.
- How and why a composite mock-up can be useful for patient, lab, and surgical communication.
- The key steps in treatment planning and why it is important that they be completed in a specific order .
- Why treatment planning and treatment sequencing must be separated into two processes to come up with a plan that integrates esthetics and occlusion .
- To develop a treatment plan that optimizes esthetics while providing optimal function, even in patients with difficult wear problems .
- The common patterns of tooth position changes with tooth wear, how they affect occlusion and esthetics, and how to correct them.
- How to safely and logically discuss treatment with your existing patients.
- Upgradeable Dentistry - When and how phasing can be done to help patients who cannot financially manage a large or complex case but have the desire and resources to begin.
