

# TMJ CURED

---

## *FIXING THE BITE IS THE ANSWER*

If you have not personally experienced a TMJ problem, chances are you know people who have. The symptoms include debilitating headaches, jaw opening issues, loose, sore and fracturing teeth and excess grinding and clenching of the teeth. In the past, many TMJ sufferers underwent surgery or massive reconstruction while a **minimally invasive solution** was *ignored*.

Most dental school graduates are confused over the workings of this unique joint. Join Dr. Reid for a course that will help you **see for yourself why** muscles hurt, jaws ache and pop, and teeth are unnecessarily damaged because of an improper bite. We'll explore and discuss various **treatment options to solve TMJ** and **bite issues** so you will understand *the best choice* for you and your patients.

### PARTICIPANTS WILL LEARN:

- The bare bone elements of a stable, comfortable and healthy bite... a unique view of the jaw bones, joints, teeth and muscles.
- A simple, predictable and practice building diagnostic tool to help over 90% of TMJ sufferers learn they have healthy joints and a bite-muscle problem!
- Improper bites are either developed from birth, a trauma to the jaws, or after extensive dentistry or orthodontics. The cause and effect of all causes will be well understood.
- Treatments to solve TMJ or bite issues vary. Bite balancing or equilibration, oral devices (splints), restorative dentistry, as well as orthodontic intervention will be discussed .

---

## *THE 'HEADACHE DILEMMA' SOLVED*

---

The title, format, and content of Dr. Reid's presentations can be adjusted to fit the needs of your audience. This course can also be customized for special groups, such as:

- woman
- dental staff
- hygiene
- *...or the entire team!*
